## SLATE

SLATE is a collection imitating a natural stone named crystal slate. Its structure comprises flat, pressed rock crumbs, creating unique compositions of the overlapping layers. The motif was transferred to the tile design, perfectly imitating this metamorphic rock. The toned-down colours including shades of gray, beige and graphite, as well as the satin texture enriched with silvery particles, provide the collection with elegance and nobility.

Due to the integrally-coloured gres technology, the tiles are scratch-proof and can bear above-standard loads. That is why they will work perfectly in residential interiors, as well as in intensely exploited passageways in investment areas. Slate is a proposition for modern interiors, characterized by simplicity and a moderate style.

The collection is supplemented by decorations including mosaics and original borders made of horizontally cut elements.
